The original version of this article unfortunately has errors and should be corrected.

After the optimization experiment, the quantitative results are provided to improve the preciseness of the results. The quantitative statistical results of HE staining experiment in Fig. 2 and Western blot experiment in Fig. 3 are supplemented.

The trend of the new results is consistent with the original results, but it is more rigorous to increase the quantitative results.

Please check the final results of Fig. 2, Fig. 3 and the original data excel file (ESM data 1).
