Correction to: Molecular Neurobiology (2021) 58:3061–3070

<https://doi.org/10.1007/s12035-021-02286-0>

The original version of our article unfortunately contained some mistakes.

1. In Fig. 4c, we mistakenly used the same image for the control group and the MOR-siRNA group. We apologize for this error and the right version should be as below.
2. In Figure legend 5, The first sentence, “Morphine changes calcium activity in the EGC line” should be “Morphine changes calcium activity in the primary EGC.”
3. Figure legend 6 should be as follows,

Morphine changes the release of proinflammatory cytokine in vitro. The release of proinflammatory cytokines

was detected by Elisa Kits. Compared with the control group, the morphine group displayed a significantly higher level of TNF- α , IL-1 β , and IL-6. However, when MOR-siRNA was applied, morphine treatment could not elevate the release of these cytokines ($P < 0.05$, a, b, c, $n = 7$, one-way ANOVA).

4. In the Discussion part, the last sentence should be,

According to the proinflammatory effect of morphine in other cells [37], data demonstrated that the enteric glial release of proinflammatory cytokine was elevated whereas this effect was abolished once MOR-siRNA was applied.

The corrections do not affect the results and conclusion of the study.

The original article can be found online at <https://doi.org/10.1007/s12035-021-02286-0>.
