It is with great pleasure that I announce another Special Issue of *Current Psychology*. Shelia Kennison (Oklahoma State University) has assembled an impressive Special Issue. Article content runs from Caesarean section or natural child-birth? Caesarean birth may damage your health to Scale For Measuring Child Sexual Abuse Awareness For Parents: A Scale Development Study. Additionally, articles will examine Parental Smoking, Changes in Smoker Image, and Susceptibility to Smoking in nonsmoking 10- to 12-year-olds, as well as Parents' Personality Traits and Children's Subjective Well-being: A Chain Mediating Model. If COVID has taught us anything it has magnified the relevance of parent-child relationships. Included in this Special Issue are

2 such articles: Evaluation of Anxiety Level in Healthcare Professionals and Mental Symptoms Encountered in Their Children during the COVID-19 Pandemic Process and Effect of Quarantine of COVID-19 Pandemic on Children with Attention-Deficit/Hyperactive Disorder.

Other studies from around the globe are documenting these effects and these articles, as well as others in this Special Issue will serve that literature well. I hope you enjoy this Special Issue.

Publisher's note Springer Nature remains neutral with regard to jurisdictional claims in published maps and institutional affiliations.
