The following are the correction captions for Figures 1–4: **Fig. 1** Monoclonal-protein based MGUS screening protocol. MGUS refers to monoclonal gammopathy of undetermined significance; SPEP, serum protein electrophoresis; IFE, immunofixation electrophoresis.

Fig. 2 Kaplan-Meier survival curves for incidence of MACE in CAD patients with and without MGUS. MACE refers to major adverse cardiac events; CAD, coronary artery disease; MGUS, monoclonal gammopathy of undetermined significance

Fig. 3 The nomogram based on the stepwise Cox regression model to predict the outcomes of CAD patients. MGUS refers to monoclonal gammopathy of undetermined significance; eGFR, estimated glomerular filtration rate; MACE, major adverse cardiac events.

Fig. 4 The calibration curve of MACE-free survival at 1, 2 and 3 years for CAD patients. Nomogram-predicted MACE-free probability is plotted on the x-axis; actual MACE-free probability is plotted on the y-axis.

The original article has been corrected.
