Furthermore, also the captions of Figure 2 and 3 contained printing errors. The correct Figure captions are reproduced in full below. We apologize for these errors.

Fig. 2 *Sumrallia rseiberti* gen. et sp. nov., Seifen III, Seifen Formation. **a** PWL 2015/5973-LS, the smallest known specimen surely belonging to the taxon; diameter = 4.4 mm. **b** PWL 2015/5976¹-LS, a juvenile specimen with very well preserved oral region, found on the external surface of a valve of a strophomenid brachiopod; diameter = 8.5 mm. **c** PWL 2015/5976²-LS, juvenile specimen encrusted by a bryozoan colony; diameter 8.5 mm. **d** PWL 2015/5975¹-LS, A complete juvenile specimen with somewhat raised oral region;

diameter 7.8 mm. Associated with *Pyrgocystis? postpetalus* Müller and Hahn, 2010 (PWL 2015/5973²-LS). All specimens were found on the external surface of a valve of a strophomenid brachiopod. **e** PWL 2015/5978-LS, a nearly complete, well preserved specimen, found on the internal surface of a valve of a strophomenid brachiopod; diameter = 11.3 mm. **f** PWL 2015/5977-LS, a very well preserved specimen, associated with an aulopodid coral; maximum diameter = 9.9 mm. **g** PWL 2015/5977-LS, detailed photograph of oral region (compare Fig. 2f); width of picture about 3 mm. **h** PWL 2015/5981-LS, detailed photograph of oral region (compare Fig. 4a); width of picture about 4 mm.

Fig. 3 *Sumrallia rseiberti* gen. et sp. nov., Seifen III, Seifen Formation. **a** Reconstruction of *Sumrallia rseiberti* gen. et sp. nov. A, B, C, D and E = ambulacra, AB, BC, CD, DE and EA = interambulacra, gray zones = peripheral rim, light grey = proximal circle of the peripheral rim. **b** Reconstruction of the oral region. PO (primary oral plates) and LBP (lateral bifurcations plates) are primary peristomial cover plates, C = shared cover plates, H = hydropore oral plate, 1 = primary ambulacral cover plates (type 1), 2 = secondary ambulacral cover plates (type 2); scale = 1 mm.
