In this article, the bottom figure (total length 49.8 mm in Japan) in Fig. 2 was corrected.

The profile is shown as a representative specimen to examine the early life history characteristics of *Anguilla marmorata*. Therefore, the authors consider that this does not influence the main results, discussion and conclusions in this study.

The original article can be found online at <https://doi.org/10.1046/j.1444-2906.2002.00401.x>.
