We are happy to bring a world of knowledge and continuing medical education during this time of pandemic. This issue brings a range of topics dealing with upper GI tract malignancies, peritoneal surface malignancies extending to head and neck malignancies especially reconstruction in resource constrained setting and versatility of local flaps. We also bring the initial experience of surgery for early laryngeal cancer and

some interesting unusual bone and soft tissue tumors and their reconstruction. Some common antibiotic policies and ERAS (Enhanced Recovery after Surgery) protocols have also been addressed and updated. Hopefully this edition brings a vast amount of knowledge and interesting topics during these difficult times. We will relentlessly work on getting you the best of research and original work being done around the world.
