The figure legends for Figure 4 and Figure 5 should be changed as follows:

Figure 4. Hemagglutination inhibition (HAI) titers in mice.

BALB/c mice were immunized intramuscularly with either 25 µg or 50 µg of HA57–264. Sera were collected before viral challenge and were assessed against A/California/07/2009. Bars indicate geometric mean titers (GMT). *n* = 8 mice per

group.

Figure 5. Protection against homologous 09 H1N1 influenza virus challenge. Groups of mice vaccinated with 25 µg or 50 µg of HA57–264 twice were challenged with 10⁶ EID₅₀ A/California/07/2009. Body weights were recorded twice a day for 7 days. *n* = 8 mice per group. Mice were carefully observed throughout each day for signs of infection.
