In this article, there was an error in the composition of the materials listed in Table 1, as the composition was mixed up with a related material. The correct composition is found in the table below (Table 1).

In experiments of equivalent conditions, we have found that the ledeburite matrix is slightly coarser for high contents of Mo. The difference is in no way devastating, because we have performed measurements on the material

of the erroneous composition using the method described in the paper without great difficulty. However, the discussion of sources of error and disagreement with the point fraction and line intercept method may have been different if the article concerned a material using the erroneous composition.

Table 1 Chemical composition of material

CE	C	Si	Mn	S	P	Cu	Sn	Mo	Cr	Fe
4.05	3.4	1.89	0.57	0.09	0.05	0.9	0.05	0.05	0.15	Bal.
