Acta Neurologica Belgica (2021) 121:1089–1091
<https://doi.org/10.1007/s13760-021-01699-x>

Contrary to the previous clinical reasoning about a possible relationship or the patient's status with vaccination, the final histopathological diagnosis of the case reported in “Acute disseminated encephalomyelitis-like presentation after an inactivated coronavirus vaccine” was a high grade glioma proven by the biopsy, which was unrelated to the vaccine. The authors apologize for any misunderstanding.
