Dear Editor in Chief,

We recently published a tutorial on sensitivity analysis for missing data in cost-effectiveness analysis [1]. We would like to inform the interested readers about the publication of the Stata [2] program and data files to complement this tutorial [3]. These files should help the reader to better understand and apply the proposed sensitivity analysis approach. The folder contains four Stata ‘do-files’, corresponding to the different sections of the article, and one illustrative dataset, based on the 10 Top Tips (10TT) trial considered in the tutorial. We hope this will be a useful addition to the tutorial.
