Welcome to the second issue of *Medical Science Educator* in 2016. The issue features a good number of manuscripts reporting on medical education, which I hope will be of interest to you. Topics cover the entire spectrum ranging from basic science education to clinical teaching and discuss teaching strategies and student research opportunities. I am also happy to present to you the meeting report of the Generalists in Medical Education Meeting. Conferences like this bring together educators from around the world and are a powerful instrument in moving medical education forward. It is therefore that we like to share meeting outcomes with those who could not join the actual meeting.

Once again, I invite educators from medical, nursing, dental, and veterinary schools to share their experiences in health science education with us. The goal of *Medical Science Educator* is to publish quality papers from an international authorship that are of interest to all who teach the sciences in healthcare. I therefore hope you will enjoy this issue and that you will continue supporting *Medical Science Educator* both as a reader and as an author of your own scholarly work for the benefit of our work and the work of others!
