Correction to: European Geriatric Medicine
<https://doi.org/10.1007/s41999-018-0067-x>

The original version of this article unfortunately contained a mistake. In section “Frailty” (Material and methods), the cut-off score for overall frailty was incorrect. The correct wording is: “Cut-of scores for high frailty per domain are as follows: 7.51 for environmental; 18.81 for physical; 11.51 for psychological; 16.01 for social; and 38.76 for overall frailty.”
