Correction to: Trends in Psychology

<https://doi.org/10.1007/s43076-021-00069-z>

The following corrections need to be made to the published article:

- The title of the article was incorrect. It was updated to “Mental Health and Coping Strategies in Undergraduate Students During COVID-19 Pandemic”
- The word “postgraduates” was incorrectly included in the following sentence of the fourth paragraph of page 2: “These surveys indicate that undergraduates and postgraduates’ students already suffer...”. This sentence was updated to “These surveys indicate that undergraduate students already suffer...”.
- The word “graduates” was incorrectly included in several sentences throughout the article. It was updated to “undergraduates” in the following sentences:
 - Page 4, paragraph 1:

The original article can be found online at <https://doi.org/10.1007/s43076-021-00069-z>

“From this perspective, there is a need to develop Brazilian studies to compose a list of knowledge related to the theme of mental health of undergraduates in the context of the COVID-19 pandemic.”

– Page 6, paragraph 4:

“When comparing groups of undergraduates from different types of Higher Education Institutions (G1—public, G2—private, or G3—community), the results indicated differences between public and private, and undergraduates from public institutions had higher scores on depression symptoms than those studying at private institutions, with an effect size of 0.18.”

– Page 13, paragraph 5:

“Regarding religiosity/spirituality, undergraduates who practice some religion presented lower scores in depression symptoms than those who do not practice it. These findings corroborate the scientific literature (de Souza et al. 2008).”

– Page 14, paragraph 2:

“Overall, undergraduates from public institutions usually belong to a lower socioeconomic status. Therefore, knowing that income has an impact on mental health (de Duarte et al. 2020; Marinho Alves and Rodrigues 2010; Nogueira and Sequeira 2017), such a result is not unexpected.”

– Page 15, paragraph 7:

“The results of this study make it possible to conclude that the pandemic seems to affect the undergraduates unanimously. However, some factors are important in this discussion.”

- The amounts in US dollars of the minimum wage in Brazil were incorrect on page 4, paragraph 4. The amounts were corrected in the following sentence:

“Most of the students (30%) declared a family income of two to four minimum wages (until US \$ 805.54), and 28% income of until two minimum wages (\$ 402.77).”

- The first sentence of the first paragraph on page 6 incorrectly informed that “normality tests (...) were performed, which demonstrated the normal distribution of the data”. This sentence was updated to:

“At first, normality tests (Kolmogorov-Smirnov and Shapiro-Wilk) were performed, and the normal distribution of data was not found.”

The original article has been corrected.
