Plant Ecology Volume 130 No. 1 (May 1997).

In Figure 6 of this paper the carbon flux from the mineral soil compartment to the atmosphere is erroneously given as $10.7 - \rho$ ($\text{t C ha}^{-1} \text{ yr}^{-1}$). The flux should be $11.3 - \rho$ ($\text{t C ha}^{-1} \text{ yr}^{-1}$). Figure 6 with the correct flux is printed again below.

Figure 6. Compartmental representation of carbon stock and cycling in the present stand. Figures in rectangles represent carbon stocks (t C ha^{-1}) and those beside arrows represent carbon flux between the compartments ($\text{t C ha}^{-1} \text{ yr}^{-1}$). Underlined figures and italic figures represent fluxes of maintenance and construction respiration of above-ground organs, respectively.
