Wetlands Ecology and Management, Vol. 7, No. 4, pp. 227–228 (1999)

Due to an unfortunate mistake, the reproduction of Figures 1 and 2 of the above-mentioned article was of inferior quality. The correct reproduction of these figures is published below:

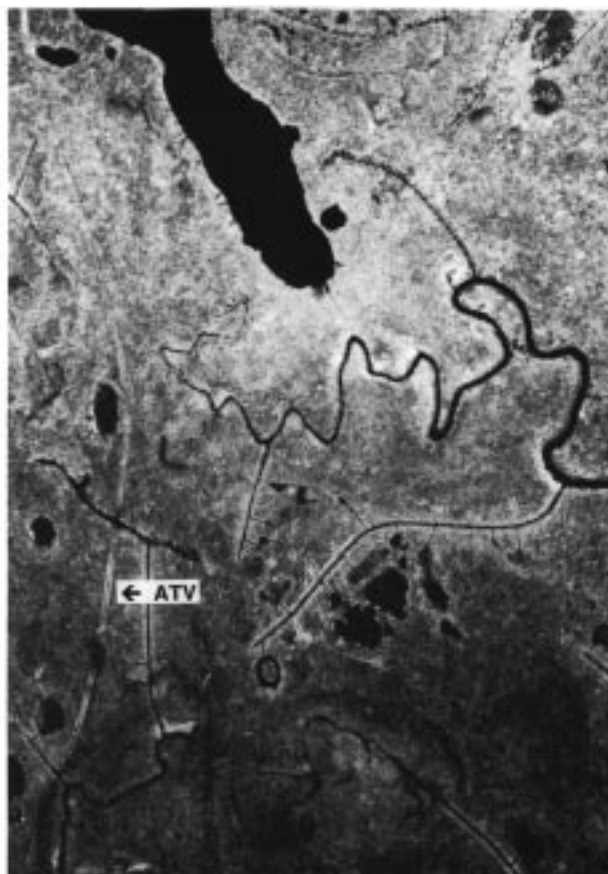

Figure 1. Aerial infrared photograph of the Petaluma Marsh (Figure 1 from Resh and Balling, 1983). Light areas represent more rapidly growing vegetation (mostly *Salicornia*). All-terrain vehicle tracks can be seen in the left portion of the photo.

Figure 2. The ATVs used in this study, the Argo™ (top left) and Lightfoot™ (top right). Track morphology showing the steel grouse on the Lightfoot™ compared to the flat plastic tread of the Argo™ (bottom).
