

### This week in therapeutics

Indication	Target/marker/ pathway	Summary	Licensing status	Publication and contact information
<b>Cardiovascular disease</b>				
Atherosclerosis	NLR family pyrin domain containing 3 (NLRP3; NALP3)	A study in mice suggests that antagonizing the NLRP3 inflammasome could help treat atherosclerosis. In mice fed a high-cholesterol diet, bone marrow reconstitution using NLRP3-deficient cells increased resistance to the development of atherosclerosis compared with that seen upon bone marrow reconstitution using wild-type cells. Next steps include identifying and testing small molecule inflammasome inhibitors in mouse models of atherosclerosis.
