

# External trade and investment

## External trade

### (Table 19.1 and 19.3 to 19.6)

The statistics in this section are on the basis of Balance of Payments (BoP). They are compiled from information provided to HM Revenue and Customs (HMRC) by importers and exporters on the basis of Overseas Trade Statistics (OTS) which values exports 'f.o.b.' (free on board) and imports 'c.i.f.' (including insurance and freight). In addition to deducting these freight costs and insurance premiums from the OTS figures, coverage adjustments are made to convert the OTS data to a BoP basis. Adjustments are also made to the level of all exports and European Union (EU) imports to take account of estimated under-recording. The adjustments are set out and described in the annual *United Kingdom Balance of Payments Pink Book* (Office for National Statistics (ONS)). These adjustments are made to conform to the definitions in the 5th edition of the *IMF Balance of Payments Manual*.

Aggregate estimates of trade in goods, seasonally adjusted and on a BoP basis, are published monthly in the ONS First Release UK Trade. More detailed figures are available from time series data on the ONS website ([www.ons.gov.uk](http://www.ons.gov.uk)) and are also published in the Monthly Review of External Trade Statistics (Business Monitor MM24). Detailed figures for EU and non-EU trade on an OTS basis are published in *Overseas trade statistics: United Kingdom trade with the European Community and the world* (HMRC).

A fuller description of how trade statistics are compiled can be found in Statistics on *Trade in Goods* (Government Statistical Service Methodological Series) available at:  
[www.statistics.gov.uk/STATBASE/Product.asp?vlnk=14943](http://www.statistics.gov.uk/STATBASE/Product.asp?vlnk=14943).

## Overseas Trade Statistics

HMRC provide accurate and up to date information via the website: [www.uktradeinfo.com](http://www.uktradeinfo.com)

They also produce publications entitled 'Overseas Trade Statistics'.

## Import penetration and export sales ratios

### (Table 19.2)

The ratios were first introduced in the August 1977 edition of *Economic Trends* in an article entitled 'The Home and Export Performance of United Kingdom Industries'. The article described the conceptual and methodological problems involved in measuring such variables as import penetration.

The industries are grouped according to the 1992 Standard Industrial Classification. The four different ratios are defined as follows:

Ratio 1: percentage ratio of imports to home demand

Ratio 2: percentage ratio of imports to home demand plus exports

Ratio 3: percentage ratio of exports to total manufacturers' sales

Ratio 4: percentage ratio of exports to total manufacturers' sales plus imports

Home demand is defined as total manufacturers' sales plus imports minus exports. This is only an approximate estimate as different sources are used for the total manufacturers' sales and the import and export data. Total manufacturers' sales are determined by the Products of the European Community inquiry and import and export data are provided by HMRC.

Ratio 1 is commonly used to describe the import penetration of the home market. Allowance is made for the extent of a domestic industry's involvement in export markets by using Ratio 2; this reduces as exports increase.

Similarly, Ratio 3 is the measure normally used to relate exports to total sales by UK producers and Ratio 4 makes an allowance for the extent to which imports of the same product are coming into the UK.

## International trade in services

### (Tables 19.7 and 19.8)

These data relate to overseas trade in services and cover both production and non-production industries (excluding the public sector). In terms of the types of services traded these include royalties, various forms of consultancy, computing and telecommunications services, advertising and market research and other business services. A separate inquiry covers the film and television industries. The surveys cover receipts from the provision of services to residents of other countries (exports) and payments to residents of other countries for services rendered (imports).

## Sources of data

The International Trade in Services (ITIS) surveys (which consist of a quarterly component addressed to the largest businesses and an annual component for the remainder) are based on a sample of companies derived from the Inter-departmental Business Register in addition to a reference list and from 2007 onwards a sample of approximately 5000 contributors from the Annual Business Inquiry (ABI). The companies are asked to show the amounts for their imports and exports against the geographical area to which they were paid or from which they were received, irrespective of where they were first earned.

The purpose of the ITIS survey is to record international transactions which impact on the UK's BoP. Exports and imports of goods are generally excluded, as they will have been counted in the estimate for Trade in Goods. However earnings from third country trade – that is, from arranging the sale of goods between two countries other than the UK and where the goods never physically enter the UK (known as merchanting) – are included. Earnings from commodity trading are also included. Together, these two comprise 'Trade Related Services'.

'Royalties' are a large part of the total trade in services collected in the ITIS survey. These cover transactions for items such as printed matter, sound recordings, performing rights, patents, licences, trademarks, designs, copyrights, manufacturing rights, the use of technical 'know-how' and technical assistance.

## Balance of payments

(Tables 19.9 to 19.12)

Tables 19.9 to 19.12 are derived from *United Kingdom Balance of Payments: The Pink Book* 2009 edition. The following general notes to the tables provide brief definitions and explanations of the figures and terms used. Further notes are included in the *Pink Book*.

## Summary of Balance of Payments

The BoP consists of the current account, the capital account, the financial account and the International Investment Position (IIP). The current account consists of trade in goods and services, income and current transfers. Income consists of investment income and compensation of employees. The capital account mainly consists of capital transfers and the financial account covers financial transactions. The IIP covers balance sheet levels of UK external assets and liabilities. Every credit entry in the balance of payments accounts should, in theory, be matched by a corresponding debit entry so that total current, capital and financial account credits should be

equal to, and therefore offset by, total debits. In practice there is a discrepancy termed net errors and omissions.

## The current account

### Trade in goods

The goods account covers exports and imports of goods. Imports of motor cars from Japan, for example, are recorded as debits in the trade in goods account, whereas exports of vehicles manufactured in the UK are recorded as credits. Trade in goods forms a component of the expenditure measure of Gross Domestic Product (GDP).

### Trade in services

The services account covers exports and imports of services, for example civil aviation. Passenger tickets for travel on UK aircraft sold abroad, for example, are recorded as credits in the services account, whereas the purchases of airline tickets from foreign airlines by UK passengers are recorded as debits. Trade in services, along with trade in goods, forms a component of the expenditure measure of GDP.

### Income

The income account consists of compensation of employees and investment income and is dominated by the latter. Compensation of employees covers employment income from cross-border and seasonal workers which is less significant in the UK than in other countries. Investment income covers earnings (for example, profits, dividends and interest payments and receipts) arising from cross-border investment in financial assets and liabilities. For example, earnings on foreign bonds and shares held by financial institutions based in the UK are recorded as credits in the investment income account, whereas earnings on UK company securities held abroad are recorded as investment income debits. Investment income forms a component of Gross National Income (GNI) but not GDP.

### Current transfers

Current transfers are composed of central government transfers (for example, taxes and payments to and receipts from, the EU) and other transfers (for example gifts in cash or kind received by private individuals from abroad or receipts from the EU where the UK government acts as an agent for the ultimate beneficiary of the transfer). Current transfers do not form a component either of GDP or of GNI. For example, payments to the UK farming industry under the EU Agricultural Guarantee Fund are recorded as credits in the current transfers account, while payments of EU agricultural levies by the UK farming industry are recorded as debits in the current transfers account.

### Capital account

Capital account transactions involve transfers of ownership of fixed assets, transfers of funds associated with acquisition or disposal of fixed assets and cancellation of liabilities by creditors without any counterparts being received in return. The main components are migrants transfers, EU transfers relating to fixed capital formation (regional development fund and agricultural guidance fund) and debt forgiveness. Funds brought into the UK by new immigrants would, for example, be recorded as credits in the capital account, while funds sent abroad by UK residents emigrating to other countries would be recorded as debits in the capital account. The size of capital account transactions are quite minor compared with the current and financial accounts.

### Financial account

While investment income covers earnings arising from cross-border investments in financial assets and liabilities, the financial account of the balance of payments covers the flows of such investments. Earnings on foreign bonds and shares held by financial institutions based in the UK are, for example, recorded as credits in the investment income account, but the acquisition of such foreign securities by UK-based financial institutions are recorded as net debits in the financial account or portfolio investment abroad. Similarly, the acquisitions of UK company securities held by foreign residents are recorded in the financial account as net credits or portfolio investment in the UK.

### International Investment Position

While the financial account covers the flows of foreign investments and financial assets and liabilities, the IIP records the levels of external assets and liabilities. While the acquisition of foreign securities by UK-based financial institutions are recorded in the financial account as net debits, the total holdings of foreign securities by UK-based financial institutions are recorded as levels of UK external assets. Similarly, the holdings of UK company securities held by foreign residents are recorded as levels of UK liabilities.

### Foreign direct investment

#### (Tables 19.13 – 19.18)

Direct investment refers to investment that adds to, deducts from, or acquires a lasting interest in an enterprise operating in an economy other than that of the investor – the investor's purpose being to have an effective voice in the management of the enterprise. (For the purposes of the statistical inquiry, an effective voice is taken as equivalent to a holding of 10

per cent or more in the foreign enterprise.) Other investments in which the investor does not have an effective voice in the management of the enterprise are mainly portfolio investments and these are not covered here. Cross-border investment by public corporations or in property (which is regarded as direct investment in the national accounts) is not covered here, but is shown in the BoP. Similarly, foreign direct investment earnings data are shown net of tax in Tables 19.15 and 19.18 but are gross of tax in the BoP.

Direct investment is a financial concept and is not the same as capital expenditure on fixed assets. It covers only the money invested in a related concern by the parent company and the concern will then decide how to use the money. A related concern may also raise money locally without reference to the parent company.

The investment figures are published on a net basis; that is they consist of investments net of disinvestments by a company into its foreign subsidiaries, associate companies and branches.

### Definitional changes from 1997

The new European System of Accounts (ESA(95)) definitions were introduced from the 1997 estimates. The changes were as follows:

- i. Previously, for the measurement of direct investment, an effective voice in the management of an enterprise was taken as the equivalent of a 20 per cent shareholding. This is now 10 per cent
- ii. The Channel Islands and the Isle of Man have been excluded from the definition of the economic territory of the UK. Prior to 1987 these islands were considered to be part of the UK
- iii. Interest received or paid was replaced by interest accrued in the figures on earnings from direct investment. There is deemed to be little or no impact arising from this definitional change on the estimates

New register sources available from 1998 have led to revisions of the figures from that year onwards. These sources gave an improved estimate of the population satisfying the criteria for foreign direct investment.

Definitional changes have been introduced from 1997 and the register changes from 1998. Data prior to these years have not been reworked in Tables 19.13 to 19.18. For clarity, the Offshore Islands are identified separately on the tables. Breaks in the series for the other definitional changes are not quantified but are relatively small. More detailed information on the effect of these changes appears in the business

monitor MA4 – Foreign Direct Investment 2002, which was published in February 2003 and is available from the ONS website.

### Sources of data

The figures in Tables 19.13 to 19.18 are based on annual inquiries into foreign direct investment for 2007. These were sample surveys which involved sending approximately 1,250 forms to UK businesses investing abroad, and 2,250 forms to UK businesses in which foreign parents and associates had invested. The tables also contain some revisions to 2006 as a result of new information coming to light in the course of the latest surveys. Further details from the latest annual surveys, including analyses by industry and by components of direct investment, are available in business monitor MA4. Initial figures were published on the ONS website in a First Release *Foreign Direct Investment 2008* in December 2009. Data for 2008 will be published in a First Release in December 2009, followed by the full business monitor MA4 in February 2009.

### Country allocation

The analysis of inward investment is based on the country of ownership of the immediate parent company. Thus, inward investment in a UK company may be attributed to the country of the intervening overseas subsidiary, rather than the country of the ultimate parent. Similarly, the country analysis of outward investment is based on the country of ownership of the immediate subsidiary; for example, to the extent that overseas investment in the UK is channelled through holding companies in the Netherlands, the underlying flow of investment from this country is overstated and the inflow from originating countries is understated.

### Further information

More detailed statistics on foreign direct investment are available on request from Richard Tonkin, Office for National Statistics, International Transactions Branch, Room 2.364, Government Buildings, Cardiff Road, Newport, South Wales, United Kingdom, NP10 8XG. Telephone: +44 (0)1633 456082, fax: +44 (0)1633 812855, email Richard.tonkin@ons.gov.uk.
