

are not discussed. Several O.R. techniques, such as non-linear programming and the use of heuristics, are not described.

Apart from a few misprints, the volume is well written and well printed. The content is well organized, attractive and informal

At £30.35, the book is expensive for an individual to buy. However, it is a very useful text and can certainly be recommended for undergraduate and postgraduate-level courses. A paperback version would make it more accessible.
