**Correction to:** *Journal of the Operational Research Society* (2003) **54**, 1275–1282. doi:10.1057/palgrave.jors.2601646

A few of the results for the 15- and 30-department problems (Tables 2 and 3) reported by us in our paper<sup>1</sup> were incorrect (because of certain typographical errors in the input data). The correct results have now been obtained and differ from the incorrectly reported ones only slightly; some of the new results actually represent an improvement. Encouraged by the interest of other researchers in our detailed results, we

have also constructed a website (<http://bilkent.edu.tr/~erel/dynlayout.html>) so that one can easily download, for all relevant problem instances, the best layout in each period and the associated cost found by us.
