SLIDE SYSTEM

The new IBM-PC slide system and a 35-mm SLR camera reportedly can freeze what is seen on an IBM-PC monitor with a button. The slide system's design positions the camera to the proper distance from the monitor, automatically insuring sharp focus while framing the complete screen, the manufacturer states. The system pre-

vents ambient light from striking the monitor causing unwanted reflections. **Zenex Incorporated.** 114

ROTARY ENCODER

The Model 35 optical-rotary encoder is a stainless-steel housing and dual-read optical structure combined to offset the effects of thermal expansion of bearing structure components while negating disk-eccentricity error. The model can provide sinewave, square-wave, or pulse output circuitry with internal-direction decoding, the manufacturer reports. **Dynamics Research Corporation.** 90

TERMINAL EMULATOR

An upgraded version of the 3278 display-station emulator has been designed to run on the HP 9000 Series 200 and 300 engineering workstations with the Pascal 3.1 operating system. The new emulator (HP 50955A) replaces HP 98695A 3270 coax interface card and HP 98795A 3278 emulator software, which runs with Pascal 2.1. The Pascal 3.1-based version provides bi-directional file-transfer capability for IBM virtual-memory/conversational monitor system and the multiple virtual-storage/time-sharing option operating systems, as well as the emulation of an IBM 3278 display station. **Hewlett Packard.** 64

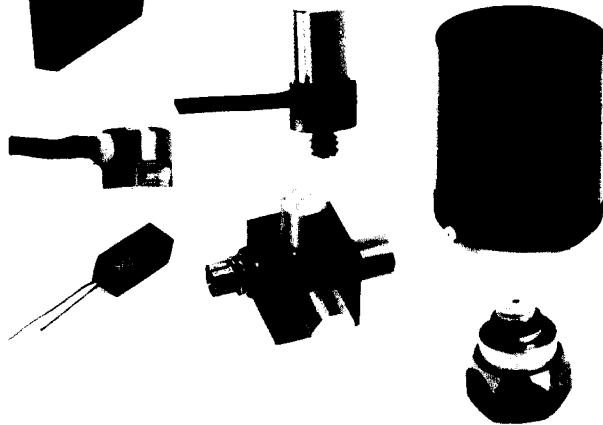

We begin with a critical set of parameters: **Yours**

Because you are important — VM will work with you from development to final testing to assure that we engineer and manufacture the right sensor for your application.

Because you are important - VM offers a broad range of off-the-shelf accelerometers. Starting with the CA400 series charge-coupled piezo-electric models designed for hostile environments and nuclear applications, to the CE500 series with internal electronics offered in a variety of sizes, sensitivities and frequency responses. VM has sensors to meet your every need. Our basic product line is complemented by pressure sensors, transmitters, associated power supplies, mounts, connectors and cables.

Because you are important — VM has a highly trained worldwide sales and service network ready to work with you for your vibration monitoring needs.

THINK VM — THINK VIBRATION MONITORING — Because we think you are important.
