Received March 31, 2006

PACS numbers: 25.40.Ep, 25.40.Sc, 25.75.Dw, 99.10.Cd

DOI: 10.1134/S0021364006120149

The following misprints were found:

1. On page 437, in the right column, in the penultimate paragraph of the paper, the sentence beginning with “Taking into account ...” to the end of the sentence should read as “Taking into account that the threshold of the $p + ^{28}\text{Si} \rightarrow p + ^{28}\text{P} + \pi^-$ reaction is equal to 0.154 GeV and the average energy transfer is $\omega = (0.145 \pm 0.003)$ GeV, the binding energy of the π^- meson seems to be too high $(0.009 \pm 0.003 \text{ GeV})$.”

2. Item 20 in the list of references should read as “M. Andersson, Chr. Bargholtz, B. Chernyshev, et al., *Phys. Rev. C* **66**, 022203 (2002).”

We apologize to the readers of the journal and particularly to B.A. Chernyshov, the coauthor of work [20].
