The authors thank S.A. Pirogov for finding an error in the proof of the main theorem of our paper “On Error-free Filtering of Finite-State Singular Processes under Dependent Distortions” (*Probl. Peredachi Inf.*, 2007, vol. 43, no. 4, pp. 271–279). The statement of the theorem remains valid (even without additional assumption on finiteness of the number of values of a completely singular process X) if Y is an output process of a stationary memoryless channels whose input signal is X . However, in the general case, where Y is absolutely regular with respect to X , the question of validity of the theorem statement remains open.
