In [1], the main result (as it is called by its author) of the paper is stated in Theorem 3. The study of the proof of this theorem revealed that the given “proof” contains inherent errors: the aim of the author was to derive the analog of the Minkowski integral inequality for the case of a variable exponent, a function $p(x)$, but, actually, the author treats $p(x)$ as a constant.

In fact, this Theorem 3 is an obvious consequence of Theorem 2.3 given in [2].
