The authors apologize for errors in Table 1 and the formula in lines 9 and 10 below Table 2. The correct formula has the form

$$R = \sum_i P_{\text{int}}^{(i)} y_i \Delta e_i / \sum_i P_{\text{ext}}^{(i)} y_i \Delta e_i.$$

The correct Table 1 is as follows.

Ratio of the computed count rates of “internal” (shielded) and “external” (unshielded) counters with allowance for the spectral sensitivity

$L, \text{ m}$	100	200	300	500
$R (\varepsilon_n = 0-1 \text{ keV})$	10034	204	25.1	4.1
