Figure 2 should be as follows:

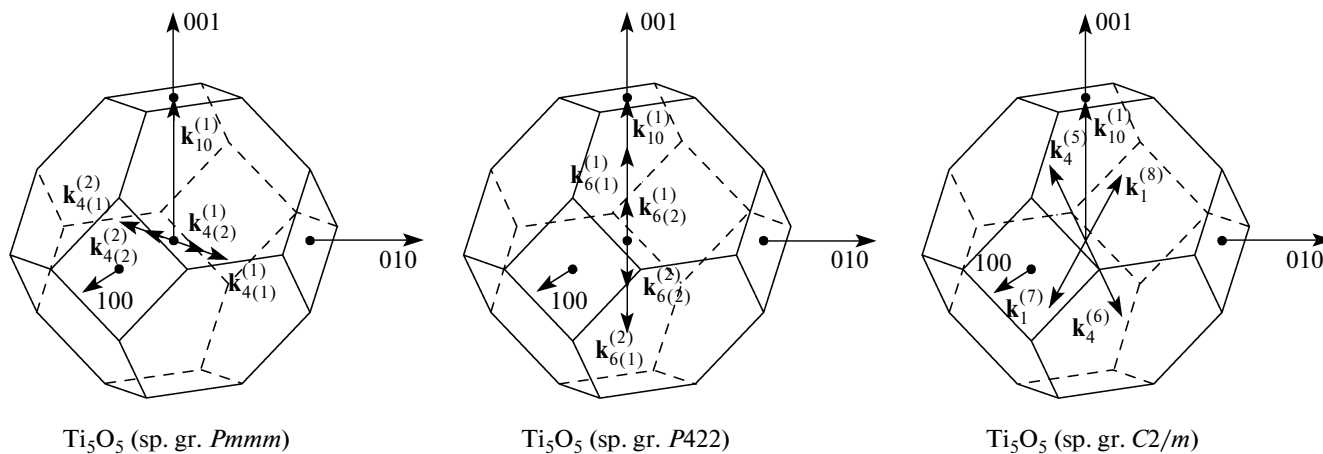

Fig. 2. Superstructure vectors of the reciprocal lattices of the orthorhombic (space group $Pmmm$), tetragonal (space group $P422$), and monoclinic (space group $C2/m$) super structures of type Ti_5O_5 , which enter in the channels of disorder–order (Ti_xO_z – Ti_5O_5) phase transitions and their location in the first Brillouin zone of the fcc lattice.
