In the article by Remon M. Zaki, Adel M. Kamal El-Dean, Radwan, S.M. et al. Synthesis, Reactions, and Antimicrobial Activity of Novel Heterocyclic Compounds Containing Cyclopenta[*d*]thieno[2,3-*b*]pyridine Moiety and Related Fused Heterocycles. *Russ J Bioorg Chem* 46, 85–96 (2020). <https://doi.org/10.1134/S1068162020010148> there was a mistake:

Certain thienopyrimidines exhibit antiviral [15, 16], antimicrobial [17], antiallergic [18], antidepressant [19], antihistaminic [20], and antitumor activities [21, 22]. In the light of the biological importance of cyclopentapyridines, thienopyridines, and thienopyrimidines and in continuation of the program for synthesis of novel heterocycles fused to thienocyclopentapyridines and thienotetrahydroisoquinoline ring system [23–29], we have synthesized a series of novel cyclopentathienopyrimidines. As a result of resistance of most of bacterial and fungal strains to the current antimicrobial therapy, we are interested in synthesis of new effective agents.
