Figure 1 contains a graphic misprint. The correct version of the figure is given below.

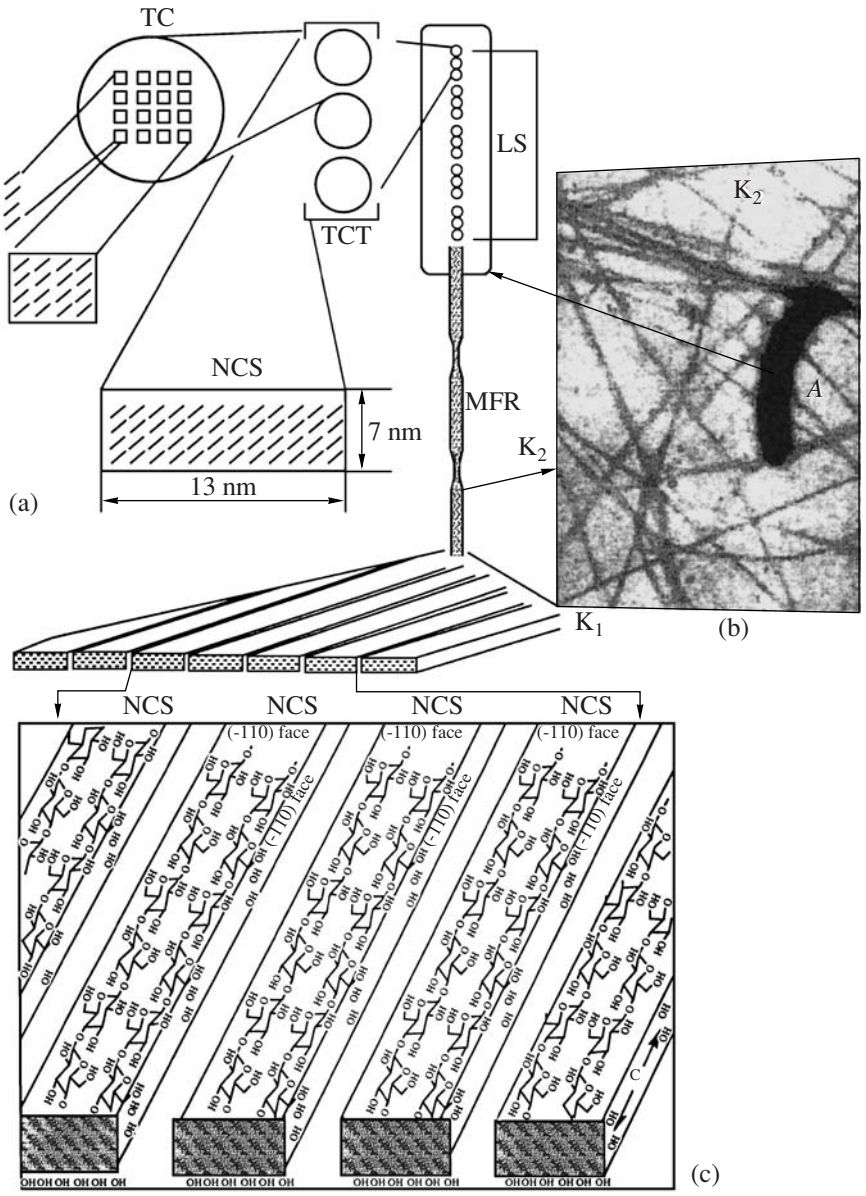

Fig. 1. Schematic diagram illustrating the biosynthesis of the cellulose *Acetobacter xylinum* gel film. (a) Brown's scheme [30] of the liner sequence (LS) of terminal complex (TC) triplets (TCTs) for *Acetobacter xylinum* and the hierarchy of the structure of microfibrillar ribbons (MFRs) composed of 10–100 nanocrystalline subunits (NCSs) with a cross section 13×7 nm in size according to Fink et al. [31]. (b) Electron microscope image of microfibrillar ribbons (K1–K2) formed by an *Acetobacter xylinum* bacterium during the synthesis for 3 h. (c) Model representation of cellulose macrochain packing. The (–110) and (110) faces forming nanocrystalline subunits and the primary OH groups are shown.
