Dear Colleagues!

DOI: 10.1134/S1087659621030147

Grebenshchikov Institute of Silicate Chemistry, Russian Academy of Sciences (ISC RAS) invites you to participate in the third Russian conference with international participation “Glass: Science and Practice” GlasSP2021, which will be held under the auspices of the National Commission on Glass of the Russian Federation and the International Commission on Glass (ICG) with informational support from one of the leading Russian academic scientific journals, *Glass Physics and Chemistry*, from 13 to 17 September 2021 at the ISC RAS in St. Petersburg.

The main objective of the conference will be a discussion by specialists of the current state of glass science, topical issues of inorganic materials science, and the interaction of scientists with representatives of the glass industry. The topics of the conference cover the fields of inorganic and physical chemistry, glass, ceramics, high-temperature oxides and coatings, and composite materials, including nanostructures, as well as a comprehensive study of the features of the nanoscale state of matter.

In the conference, issues related to the nature of the glassy state, the physicochemical properties of glass-forming melts and glasses, with the technology of traditional and special glasses, such as bio-, oxygen-free, metallic, and porous glass, will be discussed. Separate sections will be devoted to the practical application of glasses, as well as the archeometry of glass and art glass.

The conference format assumes face-to-face, extramural, and remote participation.

We invite everyone to take part in the conference.

Information regarding the conference is posted on the conference website: <https://glassp.iscras.ru>.
