We apologize for the evident typo in the very title of our piece of work: the formula MnSi_{1-x} with $x = 1.75\text{--}1.73$ makes no sense and the real Si content is x rather than $1 - x$. However, according to the notation adopted in the text, we prefer to make use of the formula MnSi_{2-x} , with $x \approx 0.25\text{--}0.27$. Thus, the correct title of our article is **Half-metallic spin polarized electron states in the chimney-ladder higher manganese silicides MnSi_{2-x} ($x \approx 0.25\text{--}0.27$) with silicon vacancies**
