With reference to eq. (5) in the original article, which reads

$$G_{\text{free}}/k_{\text{b}}T = \sum_i W_i \ln \left(\frac{W_i}{\sum_i W_i} \right) + \sum_i \frac{W_i}{\beta} \ln \left(\frac{\sum_i W_i}{\sum_i W_i + \beta W_{\text{Ag}}} \right) + W_{\text{Ag}} \ln \left(\frac{\beta W_{\text{Ag}}}{\sum_i W_i + \beta W_{\text{Ag}}} \right) + \beta W_{\text{Ag}} \sum_i C_i \omega_i, \quad (5)$$

we have neglected to state that the C_i terms refer to volume fractions (of the three water isotopomers within the gel phase).

We apologize to the readers for any inconvenience.
