The Editors-in-Chief have retracted this article. Concerns were raised regarding the selection of the data, the analysis and the resulting conclusions of the article. The authors were invited to submit an addendum to the article, but post publication review of the concerns with the article and the submitted addendum concluded that the addendum was not suitable for publication and that the conclusions of the article were not supported by available evidence or data provided by the authors. In light of these concerns and based on the outcome of the post publication review, the Editors-in-Chief no longer have confidence in the results and conclusions reported in this article.

The authors disagree with this retraction.
