Increased neuroinflammatory and arachidonic acid cascade markers, and reduced synaptic proteins, in brain of HIV-1 transgenic rats

Jagadeesh Sridhara Rao^{1*}, Hyung-Wook Kim¹, Matthew Kellom¹, Dede Greenstein², Mei Chen¹, Andrew David Kraft³, Gaylia Jean Harry³, Stanley Isaac Rapoport¹ and Mireille Basselin¹

Abstract

Correction to Rao J S, Kim H W, Kellom M, Greenstein D, Chen M, Kraft A D, Harry G J, Rapoport S I, Basselin M. Increased neuroinflammatory and arachidonic acid cascade markers, and reduced synaptic proteins, in brain of HIV-1 transgenic rats. *Journal of Neuroinflammation* 8:101.

Correction

The authors observe that the original study [1] contains errors in the molecular weights for Figures 1, 2 and 3. The correct molecular weight for IL-1 beta should be 17 KD, TNF alpha- 17 KD, sPLA2-14 KD, 5-LOX 78 KD, 15-LOX 75 KD mPGES 42 KD and cytochrome p450 epoxygenase 56 KD.

Submit your next manuscript to BioMed Central
and take full advantage of:

- Convenient online submission
- Thorough peer review
- No space constraints or color figure charges
- Immediate publication on acceptance
- Inclusion in PubMed, CAS, Scopus and Google Scholar
- Research which is freely available for redistribution
