CORRECTION Open Access

Correction to: Inactivation of the Wnt/ β-catenin signaling pathway underlies inhibitory role of microRNA-129-5p in epithelial–mesenchymal transition and angiogenesis of prostate cancer by targeting ZIC2

Zhenming Jiang¹, Yuxi Zhang^{1,2*}, Xi Chen³, Pingeng Wu¹ and Dong Chen⁴

Correction to: Cancer Cell Int (2019) 19:271

https://doi.org/10.1186/s12935-019-0977-9

Following the publication of the original article [1], we were notified of a few minor mistakes in Figures 6 and 7. The corrected Figs. 6, 7 can be found below:

The original article can be found online at https://doi.org/10.1186/s12935-019-0977-9.

Jiang *et al. Cancer Cell Int* (2021) 21:237 Page 2 of 3

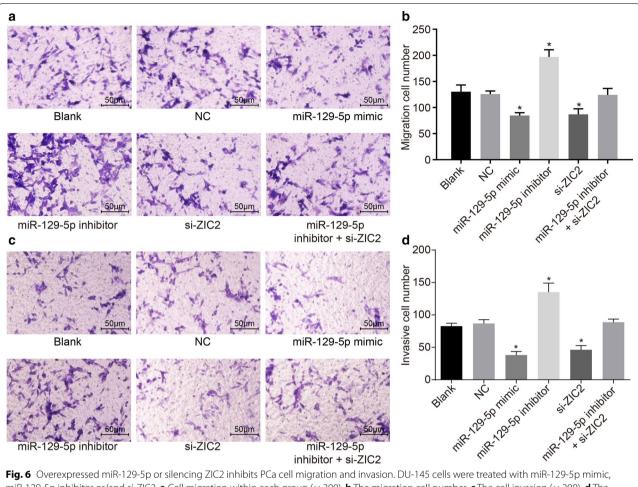

Fig. 6 Overexpressed miR-129-5p or silencing ZIC2 inhibits PCa cell migration and invasion. DU-145 cells were treated with miR-129-5p mimic, miR-129-5p inhibitor or/and si-ZIC2. **a** Cell migration within each group (\times 200). **b** The migration cell number. **c** The cell invasion (\times 200). **d** The invasive cell number in each group. *p < 0.05 vs. the blank and NC groups. The data are summarized as mean \pm standard deviation and compared using one-way analysis of variance. The experiment was repeated three times and the average value was obtained

Jiang et al. Cancer Cell Int (2021) 21:237 Page 3 of 3

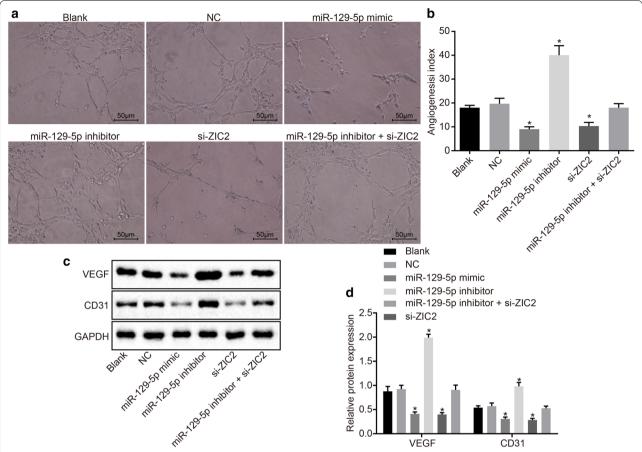

Fig. 7 Angiogenesis of PCa cells is blocked by overexpressed miR-129-5p or down-regulated ZIC2. DU-145 cells were treated with miR-129-5p mimic, miR-129-5p inhibitor or/and si-ZIC2. a The angiogenesis in each group; b the angiogenesis indexes in each group; c the protein expression of VEGF and CD31 in each group; d the statistical analysis of c. *p < 0.05 vs. the blank and NC groups. The data are summarized as mean \pm standard deviation. The experiment was repeated three times and the data were compared using the one-way analysis of variance. *VEGF* vascular endothelial growth factor, *GAPDH* glyceraldehyde-3-phosphate dehydrogenase
