EDITOR NOTE

Editor Note

C. Daniel Johnson, MD¹ and Charles M. Balch, MD²

¹Department of Radiology, Mayo Clinic Arizona, Scottsdale, AZ; ²Department of Surgery, University of Texas Southwestern Medical Center, Dallas, TX

This notice clarifies the relationship between the articles “Preoperative CT-Based Nomogram for Predicting Overall Survival in Women with Non-Endometrioid Carcinomas of the Uterine Corpus” (Lakham Y, Yakar, Goldman DA, et al. *Abdom Imaging*. 2014 Dec 31. DOI [10.1007/s00261-014-0337-0](https://doi.org/10.1007/s00261-014-0337-0)) and “Diagnostic Performance of Computed Tomography for Preoperative Staging of Patients with Non-endometrioid Carcinomas of the Uterine Corpus” (Lakhman Y, Katz SS, Goldman DA, et al. *Ann Surg Oncol*. 2015 Feb 10. DOI [10.1245/s10434-015-4410-x](https://doi.org/10.1245/s10434-015-4410-x)).

The two articles were examined following the Committee on Publication Ethics (COPE, [www.](http://www.publicationethics.org)

[publicationethics.org](http://www.publicationethics.org) <<http://www.publicationethics.org>>) guidelines with regard to suspected redundant publication. C. Daniel Johnson, M.D., Editor in Chief of *Abdominal Imaging* and Dr. Charles M. Balch, M.D., Editor in Chief of *Annals of Surgical Oncology* recognize the overlap in the patient cohort analyzed. Yet, both Journal Editors felt that different rationales and criteria were used in the two publications that lead to different, though complimentary, conclusions on different aspects of the dataset studied. It was decided to publish this notice to state this conclusion.

This comment refers to the articles available at doi:[10.1245/s10434-015-4410-x](https://doi.org/10.1245/s10434-015-4410-x) and [10.1007/s00261-014-0337-0](https://doi.org/10.1007/s00261-014-0337-0).
