Genomics could be useful for the surgical management of OSCC for: (i) assessing the risk associated with potentially malignant oral lesions, (ii) tumor staging prior to surgery, (iii) predicting postoperative risk, (iv) optimizing longitudinal monitoring, and (v) predicting the efficacy of medical treatments (<https://doi.org/10.1245/s10434-021-09904-0>).

DISCLOSURE Florian Clatot: honoraria for expert testimony from Merck Serono, MSD, and BMS.
