This article (<https://doi.org/10.1245/s10434-021-10297-3>) describes the implementation of a regionalized care model for adrenal surgery. The program has improved access to

high-volume surgeons, decreased operative time and length of hospital stay, and led to same-day adrenal surgery discharges in the majority of patients.

DISCLOSURES This project was supported by The Permanente Medical Group Delivery Science and Applied Research Initiative. The investigators are partners and staff of The Permanente Medical Group and report no other conflicts of interest.
