ASO Visual Abstract: Guide to Enhanced Recovery for Cancer Patients Undergoing Surgery—ERAS and Esophagectomy

Moorthy Krishna, MD, and Halliday Laura, MBChB, MSc

Imperial College, St. Mary's Hospital, London, UK

There is need for interventions to improve perioperative outcomes in patients with esophageal cancer. Enhanced Recovery After Surgery (ERAS) protocols are designed to accelerate recovery after surgery. Included in the summaries provided in our article (<https://doi.org/10.1245/s10434-021-10384-5>). ERAS pathways are associated with a shorter length of stay and reduced incidence of respiratory complications following an esophagectomy.
