Department of Surgery, Yale University School of Medicine, New Haven, CT

While patients' reported self-assessments of cosmetic outcome after breast-conserving surgery are considered subjective, there is a paucity of data to assess the interobserver

variability between surgeons, using gradation scales of cosmesis, and the correlation of these with patients' perceptions (<https://doi.org/10.1245/s10434-021-10442-y>).

Presented at the American Society of Breast Surgeons Annual Meeting, 29 April–2 May 2021.
