ASO VISUAL ABSTRACT

ASO Visual Abstract: Debate: Postmastectomy Radiation Therapy in T1/2N1 Disease

Anees B. Chagpar, MD, MSc, MPH, MA, MBA

Department of Surgery, Yale University School of Medicine, New Haven, CT

As discussed in the source article for this Visual Abstract (<https://doi.org/10.1245/s10434-021-10500-5>), although both radiation and surgery have some toxicity, both methods also confer some benefit in terms of local control. The question then is how therapy can be optimally de-escalated and for whom. Current ongoing clinical trials have been designed to provide some insight into this question. Until these trials are completed, this topic remains controversial.
