A scoping review was performed of percutaneous transesophageal gastrostomy tubes (PTEG) for malignant bowel obstructions. Fourteen articles were included for final analysis (<https://doi.org/10.1245/s10434-021-10667-x>).

PTEG had similar complication rates as gastrostomy tubes and improved symptom relief compared with nasogastric tubes.

DISCLOSURES Clara Zhu, Rebecca Platoff, Gaby Ghobrial, Jackson Saddemi, Taylor Evangelisti, Emily Bucher, Benjamin Saracco, Amanda Adams, Simran Kripalani, Umur Atabek, Francis R. Spitz, and Young Hong have no disclosures to report.
