Results regarding oncologic outcomes after laparoscopic, robot-assisted and transanal anterior resection are lacking. This cohort of 11 dedicated rectal cancer centers

(<https://doi.org/10.1245/s10434-021-10805-5>) was unable to show a difference in 3-year overall survival, disease-free survival, or local recurrence among the three techniques.

DISCLOSURE Crolla, Verheijen, and Consten receive fees from Intuitive Surgical. No funding was received for this study. The remaining authors have no conflicts of interest.
