Gemelli IRCCS, Rome, Italy; ⁴Department of Obstetrics and Gynecology, Gynecologic Oncology and Minimally-Invasive Pelvic Surgery, International School of Surgical Anatomy, IRCCS “Sacro Cuore - Don Calabria” Hospital, Negrar, Verona, Italy; ⁵Department of Obstetrics and Gynecology, University Hospital of Verona, University of Verona, Verona, Italy

1. The preoperative predictive score is a good diagnostic test to identify patients at low risk of nodal metastases.
2. The risk of nodal metastasis is extremely low in the case of a negative score.
3. The application of the present score associated with the SLN algorithm could avoid unnecessary lymphadenectomies (<https://doi.org/10.1245/s10434-021-11083-x>).
