Totally laparoscopic distal gastrectomy (TLDG) with modified Billroth-II Braun reconstruction could be technically feasible for gastric cancer patients. It has an acceptable range of postoperative complications and is effective in preventing bile reflux into the gastric remnant (<https://doi.org/10.1245/s10434-021-11187-4>).

Supplementary Information The online version contains supplementary material available at <https://doi.org/10.1245/s10434-021-11243-z>.

DISCLOSURES The authors declare that they have no conflict of interest.
