Time to treatment (TTT) for young women (aged 18–40 years) with invasive breast cancer. Young women receiving neoadjuvant chemotherapy (NAC) have a

significantly shorter TTT compared with patients undergoing surgery (median 20.5 days for NAC vs. 27.5 days for surgery; $p = 0.004$) [<https://doi.org/10.1245/s10434-021-11102-x>].

DISCLOSURES Evelyne Guay, Erin Cordeiro, and Amanda Roberts have no disclosures to declare.
