¹Sarcoma Unit, Department of Surgery, The Royal Marsden NHS Foundation Trust, London, UK; ²The Institute of Cancer Research, London, UK

In very elderly patients (> 80 years), surgery for extremity soft-tissue sarcomas, is well-tolerated and should be offered as the mainstay of treatment. Comorbidity and

frailty did not contribute to extended inpatient stay, and 89.6% were able to be discharged home (<https://doi.org/10.1245/s10434-021-11292-4>).
