

Call for Papers

Biosensing

Biotechnology and bioscience research studies are the most active worldwide subjects in recent years. These research areas include basic analyses, such as DNA sequencing, protein analysis, cell imaging and also the applied development of clinical examination, the diagnostics of organs, and the creation of medicines, which are all due to the large contributions of technologies in relation to analytical chemistry. In fact, the number of papers in scientific journals and conference presentations in the field of analytical chemistry has been rapidly increasing on the topics of biotechnology and bioscience.

On the basis of this background information, the journal *Analytical Sciences* has a plan to publish a special issue entitled, "Biosensing" under the supervision of Dr. Koji Suzuki (Keio University) as guest editor. Biosensing and related technologies are some of the most important subjects for measuring biomolecules and analyzing biomechanisms in living cells, organs, and bodies.

The editorial committee cordially invites you to contribute your paper (Original Papers, Short Reviews, and Notes) on biosensing and related technologies for this special issue of *Analytical Sciences*. The review process is the same as that of the normal issue, but submit your paper to the address of the guest editor listed below.

Important Deadline

Submission of Title: July 28th (Friday), 2006

Submission of Paper: September 8th (Friday), 2006

Prof. Dr. Koji Suzuki
Guest Editor, *Analytical Sciences*
Department of Applied Chemistry
Keio University
3-14-1 Hiyoshi, Kohoku-ku, Yokohama 223-8522, Japan
E-mail: suzuki@applc.keio.ac.jp
