A methodological error was discovered during final review of the page proofs of the paper "Downstream Effects of Water Withdrawal in a Small, High-Gradient Basin: Erosion and Deposition on the Skokomish River Delta" by David A. Jay and Charles A. Simenstad. The version that appeared in *Estuaries* 17: 702–715 contained an incorrect set of figures and should not have been published. Recalculation of results indicates that all historical area changes were quantitatively inaccurate, but that all conclusions drawn were sound. A revised version of the paper will be printed in a subsequent issue.
