An error in the units used in the production of Fig. 2 in "Seasonal Variation of the Stable Isotopic Compositions of Coastal Maine Plankton from Woods Hole, Massachusetts and Georges Bank" by Sam C. Wainright and Brian Fry, *Estuaries* 17:552–560 has been noted. The error does not influence either the $\delta^{13}\text{C}$ and $\delta^{15}\text{N}$ values used in the figure or the conclusions reached in the paper. A corrected Fig. 2 replacing $\mu\text{g/l}$ with $\mu\text{M C}$ and $\mu\text{M N}$ is presented below.

Figure 2. a) POC concentration, b) $\delta^{13}\text{C}$ values of dissolved inorganic carbon (DI^{13}C), c) $\delta^{13}\text{C}$ values of size-fractionated plankton, d) PN concentration, and e) $\delta^{15}\text{N}$ values of the size-fractionated plankton vs time of the year, in Woods Hole Harbor. In a, c, d and e: — total POM, ---- 20–110 μm fraction, — $<20 \mu\text{m}$ fraction, ∇ 20–41 μm fraction, $\blacktriangle$ 41–110 μm fraction, and (+) $>110 \mu\text{m}$ fraction.
