ERRATUM

Cohene, L. S., Smith, M. C., and Klein, D. Semantic Satiation Revisited With a Lexical Decision Task. *Memory & Cognition*, 1978, 6 (2), 131-140. Page 137, column 1, paragraph 1: Some of the mean reaction time latencies are incorrectly reported. The paragraph should read as follows:

A sessions effect that could be attributed to practice was observed. Subjects responded 46 ± 14 msec faster to word targets in the second experimental session (mean latency = 556 ± 13 msec) compared to the first (mean latency = 602 ± 15 msec) [$F(1,19) = 22.86, p < .001$]. Nonwords were also recognized 40 ± 9 msec faster in the second session (mean latency = 629 ± 15 msec) than in the first (mean latency = 669 ± 19 msec) [$F(1,19) = 20.82, p < .001$]. An interaction was observed whereby the decrease in decision time from the first to the second session was 36 ± 6 msec greater for the nonword-repetition condition (Session 1 = 676 ± 21 msec; Session 2 = 618 ± 14 msec) than for the nonword-nonrepetition condition (Session 1 = 662 ± 18 msec; Session 2 = 640 ± 18 msec) [$F(1,19) = 8.31, p < .01$].

The mean differences for latencies as well as the statistical analyses are correct as originally reported and the conclusions remain unaffected.
